S360 web app development

- From user story to MVP.

- Scope for version **playground**.

User story

Farah, a school teacher uses S360 to understand the different individual profile and categorise them by competency of her students based on the submitted PDF files.

Usage steps

1. Farah logs in to S360.

2. Upload a pdf/CSV/Excel file.

3. S360 analyse and generated results, such as ?:

4. Farah may query ie. submits other related questions.

5. Farah can verify the results, generated by S360.

6. Farah can save the results for audit trails or other purposes.

Key features (acceptance criteria)

A web application that allows user to:

1. Upload PDF/CSV/Excel file.

2. get AI interpretation of the uploaded PDF.

3. view "hash" generated for each interaction?

4. click "View Blockchain Explorer" which opens blockchain record:
   - questions;
   - answers;
   - document reference and;
   - timestamps

5. independently? verify that data.

User interface

- Design of the web app UI should meet the above features.

- Estimated development duration 14 days (including Sat and Sun).
